

A High Tech World

播出時間：2020 /3/18

星期三 中午 12：00

英文小達人：804 朱麒麟

編輯老師：陳思恩老師

各位老師，各位同學，大家午安，我是 804 朱麒麟，我是今天的英文小達人，今天，我要為大家播報的內容，是 **A High Tech World**

It seems that there is a new kind of technology **available** every **single** day. Some of the technology is **absolutely incredible**. It's truly amazing to **witness** how much humans can **accomplish** in such a short time.

Many people already know about **3D printing**. But a company called Apis Cor has created a 3D **printer** for buildings! They **claim** that in just 24 hours, their printer can build a 38 m² house. The machine is not too heavy and easy to **transport**. It can **actually** print an area of 132m². The **concrete** mix is **pushed out** very evenly and will dry quickly. The cost of building a house this way is much lower than a traditional house and no **waste materials** are produced.

Another amazing new **invention** is the **origami Kevlar** shield.

Kevlar is used to make the **bullet-proof** vests that police officers wear for **protection**. This **shield** is bigger and much lighter than the shields being used today. It can protect from 2 to 3 people instead of just the one. Because it's designed like origami, it's very easy and quick to open and put away.

Thanks for your listening. See you next time!
